

Crop Circle Handheld

The Crop Circle Handheld System integrates our popular Crop Circle sensors, GeoSCOUT GLS-400 and our new FieldPAK PS-12 into a single, portable and easy-to-use scouting instrument. The Crop Circle Handheld System is ideal for plot work and crop scouting. Data collected by the instrument is stored on an SD FLASH card. While weighing less than 8 lbs., the Crop Circle Handheld System is easy-to-handle and its light weight reduces user fatigue that is associated with similar, bulkier instruments. The system's FieldPAK PS-12 power-module will power the instrument for over 5 hours without recharging.

System Includes:

Crop Circle Sensor, GeoSCOUT 400 Datalogger, FieldPAK PS-12 Power Supply, Extension Rod (2 to 4 feet), Trigger Switch, Cables, Impact Resistant Storage Case, Auto and AC Adapters, Manuals and Sensor Bracket
